

# Need testing, measurement, inspection & certification services?

## Look out for the SAC Accreditation Mark

### For Inspection Bodies

### For Laboratories

### For Certification Bodies

### For Related Service Bodies (eg Proficiency Testing Providers)

## Your Assurance for Quality & Peace of Mind

“Accreditation plays a vital role in ensuring quality and reliability of test data, inspection results and certificates for sound decision making. SAC provides the assurance that bodies providing testing, measurement, inspection and certification services meet international standards and have the capability to provide such services.”

*Your Trusted Partner  
in Accreditation*

The Singapore Accreditation Council (SAC) is the national accreditation authority in Singapore. It is managed under the aegis of SPRING Singapore, a statutory board under the Ministry of Trade and Industry.

Reports and certificates bearing SAC marks are widely recognised by regulators and the industry. SAC is a signatory to various regional and international mutual recognition arrangements (MRAs). This means that reports and certificates bearing SAC marks are accepted by many of Singapore's trading partners globally and in the Asia Pacific region.

You can have greater confidence when you use the services of companies that have been accredited by the SAC. These companies have met internationally recognised standards for their competence and produce reliable test data, reports and certificates. They are also periodically assessed by SAC to ensure that they continue to comply with standards.

A company which has been certified by an accredited certification body will be issued a certificate which will bear both the SAC and the respective certification body's marks. This shows that the company

has implemented a system that meets international/ national standards to provide reliable products and services.

A company which has been certified by an accredited certification body will be issued a certificate which will bear both the SAC and the respective certification body's marks. This shows that the company has implemented a system that meets international/ national standards to provide reliable products and services.

Not all laboratories, inspection bodies, certification bodies and proficiency testing providers (PTP) are SAC accredited, and accreditation may only be for specific services rendered by these companies. So always look out for the SAC accreditation mark on endorsed reports and certificates.

The accreditation status of companies and their scopes of accreditation are available at SAC's website at:

[www.sac-accreditation.gov.sg](http://www.sac-accreditation.gov.sg)

Congratulations for choosing an SAC accredited company! You have the assurance of reliable and well accepted testing, measurement, inspection and certification services.
